

# BUSINESS CONTINUITY - COVID-19 WORKFORCE AND CONTACTS

## Monitoring & Management Platform

## Why Novel?

### Ease of Use & Fast Rollout

- Accessible anytime, anywhere, from any device.
- Intuitive user interface.
- SaaS (Software-as-a-Service) Model – configured, tested & rollout to 500 users in 3 days during CB!!!
- To-date, almost 3000 users in Singapore & Thailand, & growing!

### Holistic & Proactive Management

- Holistic platform to centrally monitor & manage situation & issues.
- Real time monitoring to ensure compliance with org & authorities' requirements e.g. quarantine measures and daily declarations.
- Automated timely alerts to improve management's response capability.

### Efficiency & Productivity

- Configurable e-workflows and e-forms replace manual & semi-auto record-keeping processes and paper-works.
- Improved data collection through configurable email reminders.
- Analytics dashboard for various levels.
- Auto management reports generation.

### Data Immutability & Traceability (Blockchain Technology)

- Database approach using blockchain to ensure immutability & traceability for contact tracing.
- Integrity & trustworthy data for monitoring, analytics & reports.

### Data Privacy & Security

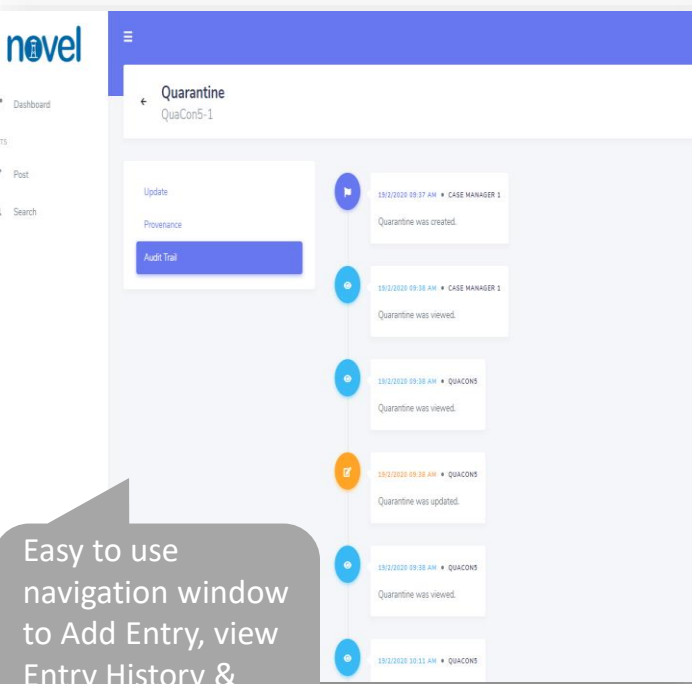

- User Access Control Management – 3 levels.
- Data encryption.
- Entry History displays provenance of entries (or blocks).
- Blockchain-based Audit Trail will provide full transparency on any access/view history to staff data.

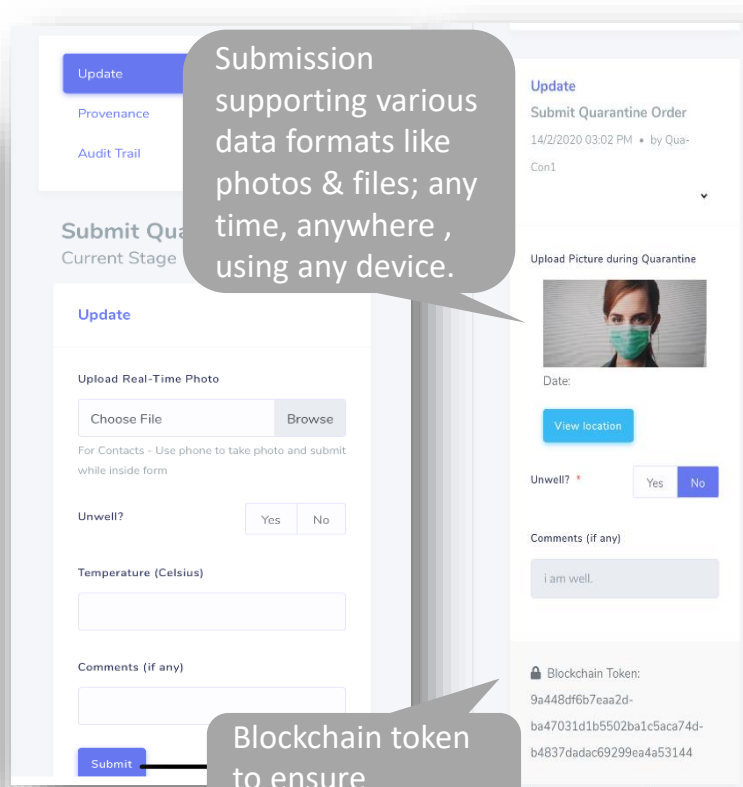

### Technical Integration

- Integration to QR code & NFC, and proprietary mobile scanners.
- Features to upload photos & files & live photo taking with location data.
- Data import & export in Excel format.
- Integration to AD (Active Directory).
- Restful APIs-based.

## Novel Platform

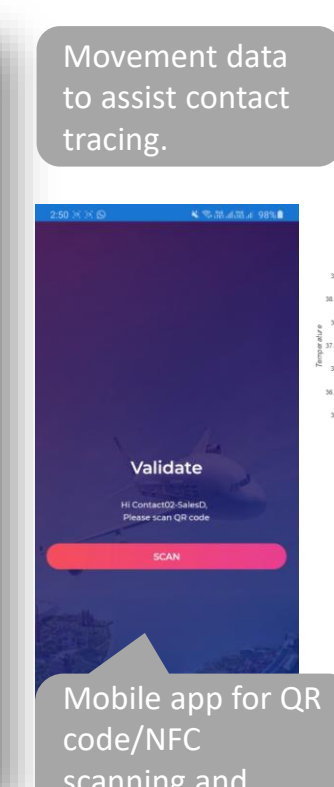

Easy to use navigation window to Add Entry, view Entry History & access Audit Trail.

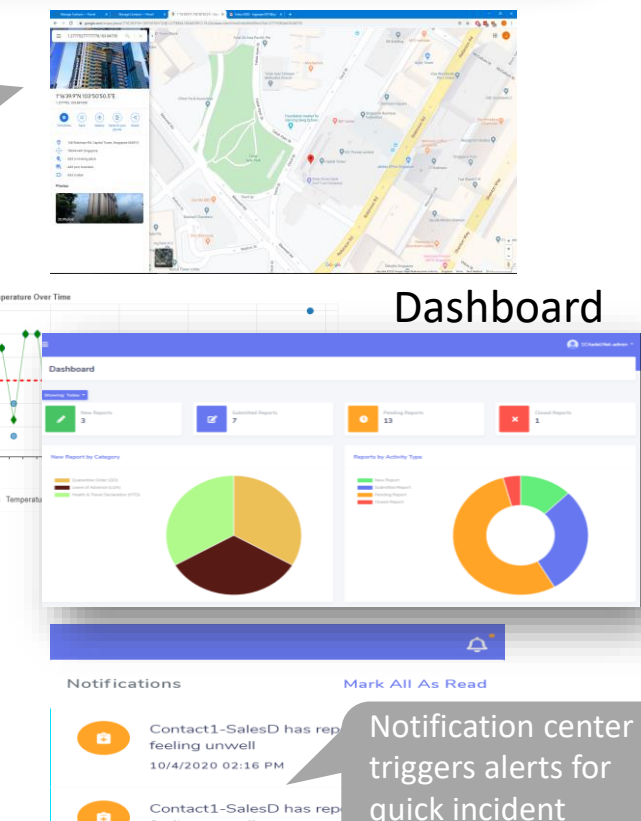

Submission supporting various data formats like photos & files; any time, anywhere, using any device.

Blockchain token to ensure authenticity.

Movement data to assist contact tracing.

Mobile app for QR code/NFC scanning and uploading of data.

Dashboard

Notification center triggers alerts for quick incident response.
